New Worldwide Safety Concept

TECHNOLOGY FOR SAFETY.

With 50 years of expertise and know-how in the design of helmets to serve your comfort and your safety, GPA has created the innovative new **REDLINE** collection. Following a patented principle, this new generation of helmets will allow for a new level of shock absorption and double the safety.

Helmets are traditionally made of two layers, a rigid shell and an EPS foam liner.

The **REDLINE** range of helmets are designed with 4 elements, the 4S, whose sandwich superposition allows for remarkable damping, and better resistance to lateral compression.

SPEED AIR 4S

The shaped turbo effect visor channels airflow to the air vents and reduces lift at high speeds. In elastomeric terms, it reduces the risk of fractures of the nose. Interchangeable.

4S Breakdown

1S : Outer shell designed to absorb the first round of shocks. It is made of absorbent polymer adapted to be deformed on impact.

2S : This interface, in case of a crash, will absorb the impact energy to reduce it.

3S : This is the main shell, reinforced in fiberglass, it provides rigidity and protection. The shock has already been dampened after passing through this level.

4S : This is the EPS foam liner that finishes decelerating the shock by crashing under the pressure of the impact and thus protecting the skull and minimizing the risk of cranial lesions.

FIRST LADY 4S

With the same benefits as with Speed Air 4S, its wide coverage provides ideal protection from poor weather conditions, the sun and glare.

➤ Speed Air Ventilation with three front louvers and two rear louvers with space to allow air flow within and between the two hulls.

➤ Anatomical jugular in black stitched leather. Secured by 4 riveted fixing points. Ensures a perfect fit for the helmet in any circumstance.

➤ Contour of the interior EPS in Red leather for comfort, aesthetics and durability.

➤ Leather chinstrap.

➤ Interchangeable and adjustable comfort foam interior padding. The different thicknesses available allow the helmet to perfectly fit all body types. Antibacterial and breathable sanitized treatment and Coolmax. Machine washable.
